# Disaster Tweets

Applying Natural Language Processing (NLP) techniques

## Problem Statement

### Predict which Tweets are about real disasters and which ones aren't

- Twitter, social networking service, allows users to post messages known as "tweets"
- Users observe or experience a disaster -> post tweets in real-time
- Person's words clear to a human right away, but not so much to a machine
- Example: "On plus side LOOK AT THE SKY LAST NIGHT IT WAS ABLAZE". Here, the author explicitly uses the word "ABLAZE", but means it metaphorically.

## Source Data

• Source: Kaggle

• **Size**: 7613 x 5

• Target value of 1 denotes tweet as a disaster

• Success Criteria: ROC-AUC (Area Under the Curve of Receiver Operating Characteristic graph) on unseen data (hold-out/test set)

| id  | keyword  | location                      | text   | target |
|-----|----------|-------------------------------|--|--------|
| 1   |          |                               | Our Deeds are the Reason of this #earthquake May ALLAH Forgive us all  | 1      |
| 4   |          |                               | Forest fire near La Ronge Sask. Canada   | 1      |
| 5   |          |                               | All residents asked to 'shelter in place' are being notified by officers. No other evacuation or shelter in place orders are expec | 1      |
| 48  | ablaze   | Birmingham                    | @bbcmtd Wholesale Markets ablaze http://t.co/lHYXEOHY6C  | 1      |

# Exploratory Data Analysis

• **Data Balance**: Nearly balanced -> No data balancing required

| Target | % of records |
|--------|--------------|
| 0      | 57.0%        |
| 1      | 43.0%        |

- Missing Values
  - o Location with 1/3 values -> Drop the attribute
  - o Keyword is redundant information -> Drop the attribute

| Attribute | % Nulls |
|-----------|---------|
| Keyword   | 0.8%    |
| Location  | 33.2%   |
| Text      | 0.0%    |

- URLs (http://) and mentions (@someone) are of no use whatsoever
- **Emoticons** could be useful in predictions, as humans tend to use them in casual language to express their feelings and state of mind

| id  | keyword  | location                      | text   | target |
|-----|----------|-------------------------------|--|--------|
| 1   |          |                               | Our Deeds are the Reason of this #earthquake May ALLAH Forgive us all              | 1      |
| 4   |          |                               | Forest fire near La Ronge Sask. Canada   | 1      |

| 119 | accident |                               | Can wait to see how pissed Donnie is when I tell him I was in ANOTHER accident??   | 0      |

# Data Cleaning

#### Remove the following items:

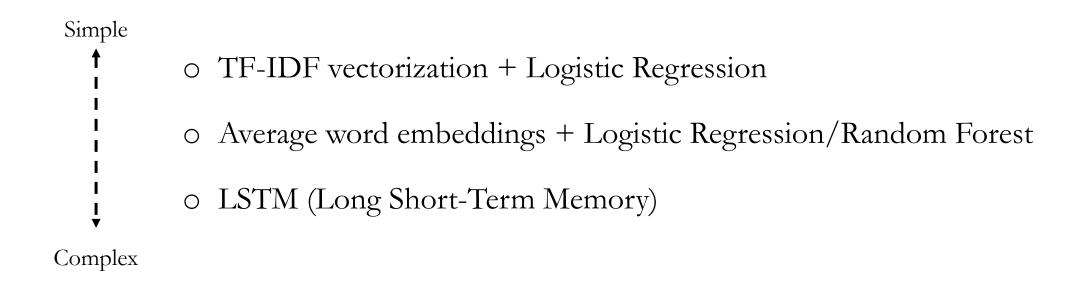

- ✓ URLs
- ✓ Mentions (@)
- ✓ Emoticons
- ✓ Punctuations (! # \$ ? @ % & () \* ^\_ + / \ < = > [] { } | ~ . "``, :;). Retain hashtag text (string following # character)
- ✓ Tabs and line breaks
- ✓ Numeric digits
- ✓ Stop words using nltk library. E.g. "the", "is", "in", "for", "where", "when", "to", "at" etc.
- ✓ Non-ascii characters. E.g. convert CarolinaåÊAblaze to CarolinaAblaze.

#### Apply following transformations:

- ✓ Lower case the characters "Fire" and "fire".
- ✓ Lemmatize using spacy library

| Word                | Lemma |
|---------------------|-------|
| seen/saw/seeing/see | see   |
| drove/drive/driving | drive |
| better/good         | good  |
| playing/played/play | play  |

# Statistical Modeling

Loss function: Log-loss (aka binary cross-entropy) to optimize the model

## **TF-IDF**

### Vectorization

#### Clean Documents

#### **Pre-processing**

Remove -

High-freq. words (present in more than 80% of documents)

Low-freq. words (present in less than 5 documents)

(with early-stopping criteria)

## Conclusion

| Vectorization Model          | TF-IDF              | Document-level V    | LSTM          |        |
|------------------------------|---------------------|---------------------|---------------|--------|
| Statistical Model            | Logistic Regression | Logistic Regression | Random Forest | LSTM   |
| ROC AUC                      | 0.847               | 0.853               | 0.858         | 0.851  |
| Log-loss                     | 0.4685              | 0.4676              | 0.4713        | 0.4579 |
| Accuracy                     | 78.7%               | 79.1%               | 81.0%         | 79.6%  |
| Training Effort (in minutes) | 1                   | 1                   | 17            | 1      |

### ✓ Document-level word embedding + Random Forest

- Simple to comprehend
- Best results of the lot
- o Training effort large relative to others

### **Future Scope**

Transfer learning: Existing LSTM-based model – Embedding layer + Spacy word2vec
